

MEDIA RELEASE

For Immediate Release

November 15, 2018

St. John's, NL – PAL Airlines flight 1922, a Dash 8 aircraft, enroute to Deer Lake, NL (CYDF) with 47 passengers and 4 crew onboard had an indication of a potential nose landing gear issue. The crew followed prescribed procedures including a flyby of the Deer Lake control tower for a visual indication of the nose gear position. Given adverse weather in Deer Lake, the aircraft proceeded to Stephenville for landing as the nose gear could not be confirmed as locked. Stephenville Airport rescue vehicles met the aircraft on landing. The aircraft landed without the nose gear locked in position and came to a stop on the runway.

There were no injuries to passengers or crew. Passengers were transported to the terminal via ground vehicles.

Customers in Newfoundland and Labrador can expect changes to their flights today, in addition to today's revised schedule related to the inclement weather. Customers are asked to consult our website or our reservations center at 1-800-563-2800.

Additional PAL Airlines personnel are enroute to Stephenville.
